Project Problem Statement Submission Form

Sec No-02	Team No-	Project Title:-Product review & Rating System
Team Lead Roll Number		2520090086
Team Lead Name		Shashank bangale
Team Member Roll Number		2520030249
Team Member Name		Namith dharu

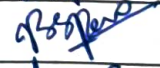

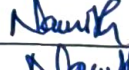

1. Abstract:

The Product Review and Rating System is a web-based application designed to help users make informed purchasing decisions by providing a platform to share and analyze product feedback. In today's digital marketplace, customer opinions play a crucial role in influencing buying behavior. This system enables users to submit reviews, rate products on a standardized scale, and view aggregated ratings and comments from other users.

The application collects user-generated data and processes it to calculate average ratings, identify top-rated products, and highlight popular trends. It also incorporates features such as user authentication, review filtering, and sorting mechanisms to enhance usability and reliability. Advanced implementations may include sentiment analysis to classify reviews as positive, negative, or neutral, improving the overall evaluation process.

By ensuring transparency and accessibility of product information, the system benefits both consumers and sellers. Consumers gain insights into product quality and performance, while businesses can use feedback to improve their offerings. The Product Review and Rating System thus serves as an efficient tool for decision-making in modern e-commerce environments.

2. Module Mapping

Module Name	Assigned Roll Number(s)	Signature
User Authentication & Registration	2520090086	
Product Review & Rating Management	2520090086	
Database & Backend Integration	2520030249	
Review Analysis & User Interface	2520030249	

3. Module Details

1. **User Authentication & Registration**

Responsible for developing login, signup, password validation, and user session management features to ensure secure access to the system.

2. **Product Review & Rating Management**

Handles the functionality for adding, editing, deleting, and displaying product reviews and ratings submitted by users.

3. **Database & Backend Integration**

Responsible for designing the database, storing product and review data, and integrating backend operations with the frontend application.

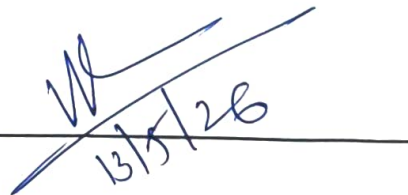

4. **Review Analysis & User Interface**

Focuses on creating an interactive user interface, displaying average ratings, sorting/filtering reviews, and implementing sentiment analysis or trend visualization features.

4. Frameworks / Platforms / Software Used

- **Frontend:** HTML, CSS, JavaScript, React.js
- **Backend:** Node.js, Express.js
- **Database:** MongoDB / MySQL
- **Programming Language:** JavaScript
- **Development Tools:** Visual Studio Code, GitHub
- **API Testing Tool:** Postman
- **Browser:** Google Chrome
- **Operating System:** Windows 10/11
- **Version Control:** Git
- **Optional Libraries:** Bootstrap / Tailwind CSS for UI design
